

VP Engineering Operations

Context & Impact:

Lansweeper continues to scale rapidly, and engineering operations have become a critical leverage point for sustainable growth.

As **VP Engineering Operations**, you will drive operational maturity, cost efficiency, and productivity across Engineering. In the near term, your focus will be on scaling processes, increasing engineering impact, rolling out AI initiatives, and gaining full control over engineering costs, vendors, and tooling.

Challenge:

The main challenges you'll face are:

- Creating **full visibility and control** over engineering costs (cloud, tools, vendors)
 - Increasing **engineering productivity and performance**
 - Driving **process maturity and AI adoption** across global engineering teams
-

Key Responsibilities:

- Being responsible together with other engineering leaders for **defined project commitments**, ensuring that project and product management are aligned with project statuses, risks and achievements.
- Own and scale **engineering operations** across teams, including budgets, vendors, tooling, and cloud spend (AWS)
- Define and manage **engineering-wide budgets**, forecasts, and cost optimisation initiatives
- Lead and develop the **Engineering Operations Team**
- Drive **operational excellence** by improving delivery predictability, productivity, and efficiency
- Roll out and embed **AI programs and tooling** to increase engineering impact
- Oversee **vendor and license management**, including negotiations, renewals, and consolidation

- Partner closely with the **CTO, Engineering & Product leadership, Finance, HR,** and executive stakeholders
 - Reduce operational workload for the **CTO and VP-level leaders** by owning day-to-day engineering operations
 - Establish scalable **agile-at-scale frameworks**, processes, and governance
 - Report on operational performance, risks, and ROI at executive level
-

Key Requirements:

Hard skills:

- Proven experience as a **VP Engineering Operations, Head of Engineering Operations**, or senior **Engineering / Program Operations leader**
- Strong ownership of **engineering budgets** and cost control (cloud, tooling, vendors)
- Thorough understanding of project/program management techniques and methods
- Hands-on experience with **AWS cloud cost management**
- Deep knowledge of **Agile at scale**
- Experience with **vendor negotiations**, license management, and consolidation
- Strong working knowledge of **Jira** and modern engineering tooling
- Technical affinity; **software engineering background** is a strong plus

Soft skills:

- Executive-level **leadership and decision-making** capability
 - Strong **stakeholder management**
 - Strategic yet hands-on, with a focus on **execution and outcomes**
-

Company Info:

Lansweeper is the Technology Asset Intelligence platform that transforms raw asset data into trusted, actionable insights—spanning hardware, software, cloud, IoT, and OT.

With a single solution, organizations gain full visibility across their technology estate, empowering IT, security, operations and finance teams to make smarter, faster decisions.

We help our customers:

- Manage compliance risks
- Reduce complexity by delivering timely, accurate visibility and seamless integration into their ecosystems

From universal asset discovery to AI-powered intelligence, Lansweeper delivers clarity and confidence to organizations worldwide.

Our culture is built on four values:

- **One Team** – united across boundaries
 - **We Care** – customers and people at the centre
 - **We Grow** – learning, sharing, improving
 - **We Deliver** – focusing on what truly matters
-
